

A Published mechanistic contrast

Dashed: multistep pathway context

B Sustained TNF: same stable fates

	FB+	FB-
Survival	●	●
Apoptosis	●	●
Necrosis	●	●

Exact terminal-fate agreement

Global sustained traces differ (verified word)

C Shared state, fixed observations

8 shared raw updates

TNFR > DISC_TNF > CASP8 > BAX
> MOMP > Cyt_c > apoptosome > CASP3

NFkB = 0 CASP3 = 1 MPT = 0

Visible history: CASP3_up

Continued TNF from this state:
identical exact language {epsilon}

D Withdraw TNF from that state

Same action: withdraw_TNF

CASP3 persists

CASP3 can turn off

Apoptosis only

Naive signature only

FB+ is simulated by FB-; reverse fails

State-specific result; not cellular recovery
